Questions related to Assignment 3

1) What tag is used to create a form? Name its attributes.

    a. Ans: <form> The attributes needed are "action" and "method"

2) "Get" method is the most secure way of submitting data. Yes or No? State reason.

    a. Ans: No, because query strings can still be decoded if the result is placed at the end of the address. Post, meanwhile, send the data in encrypted packages so that it's harder to decode.

3) How are label and input connected?

    a. Ans: If we're making an input element, it must be accompanied by a label, and a label has the attribute "for" in order to connect it to the input element it's labeling

4) Does placeholder get submitted to the server?

    a. Ans: No they don't

5) How would you make an input required?

    a. Ans: Type in the attribute "required" within the input tag

6) How would you make an input read-only?

    a. Ans: Type in the attribute "readonly" within the input tag

7) What tag is used to create groups in a select list?

    a. Ans: <optgroup>

8) What is the difference between Radio Buttons and Check-boxes?

    a. Ans: Check-boxes can allow you to chose multiple options if you want, while radio buttons only allow you to chose one option.

9) What tag is used to create summary input? Give Example.

    a. Ans: <textarea> is used for summary

    ex: <textarea name="summary" id="summary">

        This is the value of text area

    </textarea>

10) The form is of no use, without which element?

    a. Ans: <button> Otherwise, the information given won't be sent and analised
